*Newton Coin Project, Fund the future*

---

**Newton Coin Project** was created to help fund research and development projects in the medical and renewable energy fields.

It is no secret that many important medical research projects in the world are underfunded or completely lack funding altogether. Our mission with Newton Project is to change that.

We believe that through our commitment to helping fund these projects, we can aid in potentially finding cures for many diseases that still plague humanity. However, that is just one area of research we intend on focusing on.

Newton Coin Project is also looking to fund research and development of newer more compact designs of renewable energy production systems.

Many communities in under developed countries would greatly benefit from low cost renewable energy projects.

Because Newton Coin is a crypto project, Newton will fund scientific research that supports Newton Coin and the community.

One of our goals is to make Newton Coin the primary crypto payment system in the medical and renewable energy research fields. The success of our project means the ability to make important changes in the world. Ultimately, in order for this to happen, we need YOU, to help us achieve our goal.

**NCP Freelance Website Now in Beta testing**

NCP Freelance is an advertising website for bloggers/vloggers/writers/translators, coders, programmers, advertisers, marketers, graphic artists and more, to offer their talents in exchange for NCP coin.

Are you looking for a writer, programmer, and web developer to create a project for you?

All you have to do is log onto the freelance website and browse the existing offers or create your own request for freelancers to bid on.

Part of the proceeds from the website will be used to fund science projects.

As the site grows, more services will be added.

What other ways does Newton Coin Project contribute?

Newton Coin Project started by contributing computing resources to the Rosetta@home distributed computing Project for [protein structure prediction](#).

The Rosetta Project is on the Berkley Open Infrastructure for Network Computing (BOINC) platform, run by the Baker laboratory at the University of Washington.

Rosetta@home uses idle computer processing resources from volunteer' computers to perform calculations on individual work units to cure diseases, study global warming, discover pulsars, and do many other types of scientific research!

Consequently, NCP will be one of the best cryptos in the market. NCP First funding campaign "*The researchers are working on a potent-human-antibody-treatment-for-rabies-diseases which is almost always fatal in humans*" started. Given such a scientific aims are a factor in the applicability of crypto in real-world business usage, it then follows that NCP's long-term prospects are quite good, as blockchain technology continues to gain a foothold in business. The success of such work could open

the doors for other major businesses. The future of NCP looks great.
